

PROFILE SUMMARY

Snowflake Data Engineer with 4+ years of experience designing scalable ETL/ELT pipelines and cloud-based data solutions using Snowflake, AWS, Apache Airflow, Python, SQL, and PySpark. Experienced in real-time and batch data processing, Snowpipe, Streams & Tasks, Dynamic Tables, data warehousing, and workflow automation. Skilled in Snowflake performance optimization, enterprise-scale data pipeline development, and mission-critical application support. SnowPro and AWS certified, with strong expertise in Unix/Linux environments, cloud technologies, and data engineering best practices.

EDUCATION

- Sinhgad College of Engineering** Pune, India
B.E. in Computer Engineering; CGPA: 9.00 August 2019 – June 2022
- Government Polytechnic Pune** Pune, India
Diploma in Information Technology July 2016 – June 2019

SKILLS SUMMARY

- Cloud & Data Platforms:** Snowflake, AWS, Databricks, InfoWorks
- AWS Services:** S3, Glue, Lambda, EMR, CloudWatch, Redshift, IAM
- Data Engineering & Big Data:** ETL/ELT, Data Warehousing, Real-Time Processing, Batch Processing, Data Migration, Data Validation, Data Modeling, CDC, Workflow Automation
- Programming Languages:** Python, SQL, PL/SQL, Shell Scripting
- Orchestration & Big Data Tools:** Apache Airflow, PySpark
- Databases:** Oracle, Teradata
- DevOps & Tools:** Git, CI/CD, TWS, Crontab
- Operating Systems:** Unix, Linux
- Soft Skills:** Leadership, Task Management, Communication, Teamwork, Client Handling

PROFESSIONAL EXPERIENCE

- Amdocs** Pune, India
Data Engineer July 2022 – Present
 - Designed and optimized scalable Snowflake data pipelines using Snowpipe, Streams, Tasks, and Dynamic Tables for real-time and batch data processing.
 - Developed ETL/ELT workflows using AWS Glue, Apache Airflow, Python, SQL, and PL/SQL to ingest and transform data from multiple enterprise systems.
 - Implemented AWS services including S3, Lambda, EMR, CloudWatch, and Redshift for cloud-native data engineering solutions.
 - Built automated data validation and monitoring frameworks, improving data quality and reducing manual operational effort.
 - Developed 15+ Unix/Shell automation scripts and automated 30+ operational workflows, improving deployment efficiency and reducing manual workload.
 - Worked extensively with Git, TWS, Crontab, Unix/Linux, and CI/CD deployment processes for workflow automation and release management.

PROJECT BACKGROUND

- Real-Time Customer Data Pipeline**
 - Designed and implemented an end-to-end real-time data pipeline to process 100M+ customer transaction records from AWS S3 into Snowflake using Snowpipe.
 - Leveraged Snowflake Streams and Tasks for Change Data Capture and incremental data processing, reducing data latency.
 - Implemented Dynamic Tables, clustering keys, and warehouse optimization strategies to improve downstream analytics performance.
 - Used AWS Glue and Lambda for preprocessing, schema validation, and automated data quality checks.
 - Integrated Apache Airflow for orchestration and monitoring of enterprise-scale workflows.
 - Enabled near real-time reporting and analytics for business users through a scalable cloud-based architecture.
- Batch ETL Data Migration Pipeline**
 - Developed batch ETL pipelines to migrate structured data from Oracle and Teradata systems into Snowflake Data Warehouse.
 - Built PySpark-based transformation workflows for large-scale data cleansing, validation, and aggregation.
 - Automated scheduled workflows using Apache Airflow and Crontab for daily data ingestion and reconciliation.
 - Implemented data quality validation, logging, and monitoring mechanisms to ensure pipeline reliability.
 - Improved ETL processing efficiency and reduced manual intervention through automation and workflow optimization.

PROFESSIONAL CERTIFICATIONS

- Snowflake SnowPro Core Certification
- AWS Certified Data Engineer
- AWS Certified Cloud Practitioner
